

Unit 10 Concept Check

Name: _____

Date: _____

*Show all your thinking. Sketch strips when you need to.***1**

Sketch a strip cut in halves with one half shaded. Then sketch the same strip cut in eighths with the same shaded length. Write both fractions and the equivalence (e.g., $\frac{1}{2} = \frac{?}{8}$).

2

Find an equivalent fraction. Multiply both the top and the bottom by 3: $\frac{2}{5} = \frac{?}{?}$

3

Find an equivalent fraction for $\frac{3}{4}$ with a bottom of 12. Show what you multiplied both numbers by.

4

Simplify $\frac{6}{8}$ to its simplest form. Show what you divided both numbers by.

Unit 10 Concept Check (continued)

5

Compare $\frac{2}{3}$ and $\frac{5}{6}$. Re-cut both to a common bottom. Use $<$, $>$, or $=$.

6

Felix says $\frac{1}{3}$ is bigger than $\frac{1}{2}$ because 3 is bigger than 2. Is Felix right? Fix the mistake and show why.
