

Finding Equivalent Fractions

Independent Practice

Name: _____

Date: _____

INDEPENDENT PRACTICE — SHOW YOUR THINKING

1. Find an equivalent fraction for $\frac{1}{3}$ by multiplying the numerator and denominator by 2. Write the equation.

2. Find an equivalent fraction for $\frac{2}{5}$ by multiplying the numerator and denominator by 3. Write the equation.

3. Atlas says $\frac{2}{3} = \frac{6}{9}$. Show the multiplication he used. Is he correct?

4. Write two fractions equivalent to $\frac{3}{4}$. Show your multiplication for each.

Finding Equivalent Fractions (continued)

5. Cora multiplied the top by 4 and the bottom by 3. She got $\frac{4}{9}$ from $\frac{1}{3}$. What went wrong?

6. Fill in the blank: $\frac{2}{\underline{\quad}} = \frac{6}{12}$. Explain how you found the denominator.

7. Reflection: why do you have to multiply the numerator AND the denominator by the same number?
