

Strategies for Finding the Product

Name: _____

Date: _____

INDEPENDENT PRACTICE · SHOW YOUR THINKING

1

Use the distributive strategy to find 6×7 . Split the array. Show: $6 \times 7 = 6 \times 5 + 6 \times 2 = \underline{\quad} + \underline{\quad} = \underline{\quad}$

2

Find the product of 9×4 using doubling: $9 \times 4 = 9 \times 2$ doubled = $\underline{\quad}$ doubled = $\underline{\quad}$

3

Atlas made 9 friendship bracelets. Each has 4 beads. Use a strategy to find the total beads. Show your work.

4

Felix says $8 \times 6 = 48$. Hazel splits it: $8 \times 6 = 8 \times 3 + 8 \times 3 = \underline{\quad} + \underline{\quad} = \underline{\quad}$. Check Felix's answer.

5

Find: $7 \times 6 = \underline{\quad}$ $8 \times 4 = \underline{\quad}$ $9 \times 5 = \underline{\quad}$. Show one of them using the distributive strategy.

6

Explain: how does splitting a $\times$ fact into two easier facts help you find the answer?
