

Comparing Fractions with Like Denominators

Name: _____

Date: _____

INDEPENDENT PRACTICE SHOW YOUR THINKING

1

Compare: which is bigger, two-fifths or four-fifths? Write the comparison using $<$, $>$, or $=$.

2

Compare: three-eighths and seven-eighths. Sketch both on strips. Write the comparison.

3

Compare: five-sixths and two-sixths. Which is bigger? Write the comparison.

4

Atlas ate three-tenths of a candy bar. Hazel ate seven-tenths of the same-size bar. Who ate more, and how do you know?

Comparing Fractions with Like Denominators (continued)

5

Three fractions: two-ninths, five-ninths, eight-ninths. Put them in order from smallest to largest.

6

Felix says "if the bottoms are the same, the bigger bottom wins." Is Felix right? Fix the mistake.

7

Reflection: when the denominators match, why do you only need to look at the numerators?
