

Unit 10 Summative Assessment

All Seven Lessons

Name: _____

Date: _____

Show all your thinking. Sketch strips if it helps.

1. A strip is cut into 6 equal parts and 2 are shaded. Split each piece into 3 smaller pieces. Write both fractions and explain why they are equivalent.

2. Find an equivalent fraction for $\frac{3}{4}$ by multiplying by $\frac{2}{2}$. Show your equation.

3. Simplify $\frac{6}{8}$ to its simplest form. Show your grouping.

4. Compare $\frac{2}{3}$ and $\frac{3}{5}$. Re-cut to a common denominator. Use $<$, $>$, or $=$.

5. Compare $\frac{5}{8}$ and $\frac{1}{3}$. Use the benchmark (one-half) shortcut. Show your reasoning.

Unit 10 Summative Assessment (continued)

6. $\frac{3}{6} + \frac{2}{6} = ?$ Show your work on a strip.

7. $\frac{7}{10} - \frac{4}{10} = ?$ Show your work.

8. Hazel has $\frac{2}{8}$ of a candy bar. Atlas gives her $\frac{3}{8}$ more. Then she eats $\frac{1}{8}$. How much does Hazel have left? Show each step.

9. Reflection: pick one skill from this unit — equivalent fractions, simplifying, comparing, or adding and subtracting. Explain how to do it in your own words.
